

Happy Customer Score Forum - Retail Contact Center Analysis

Data Distribution

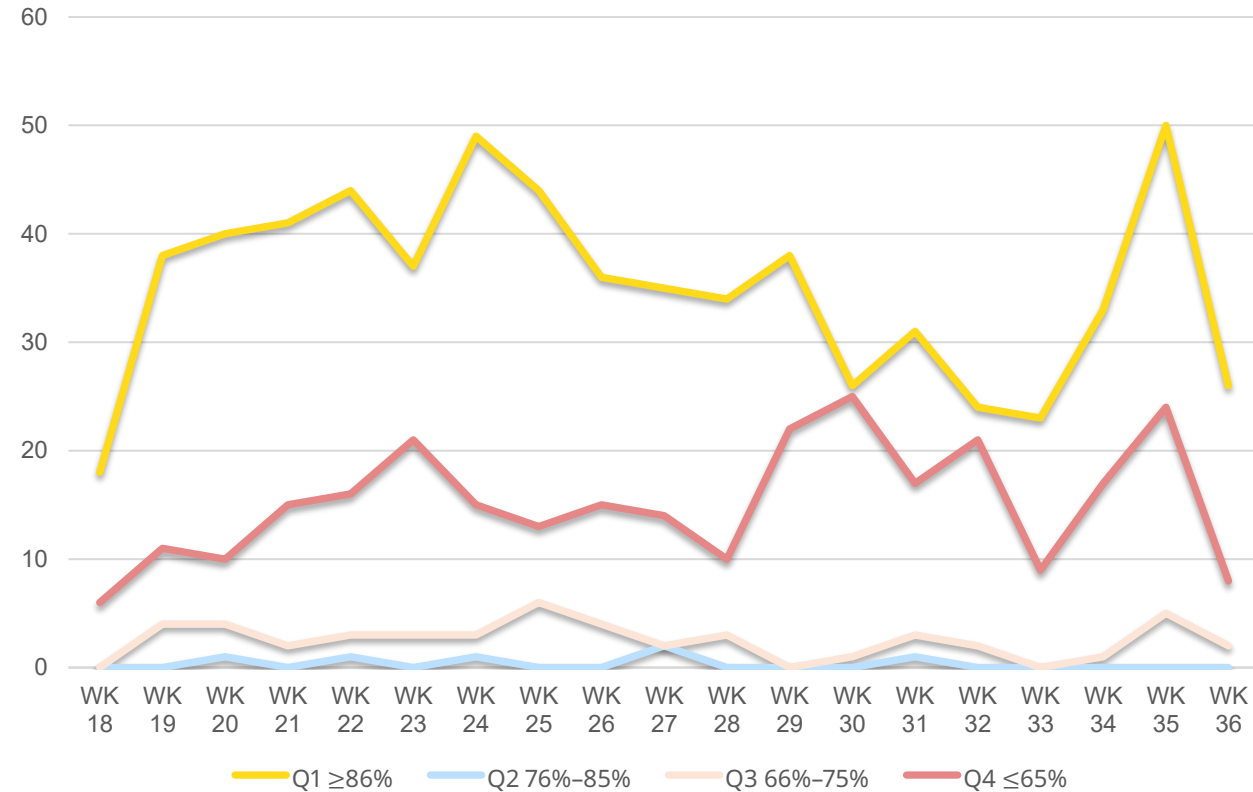

Goal: How can we move from current performance to sustained success?

- Distribution by Employee
- Distribution by Supervisor

Distribution by Employee

Quartile distribution of happy customer score performance by Employee count from week 18 to week 36 (May through August).

- **Q1 and Q4** results show the **highest distribution**
- **Few Employees** with high survey count who are low performers

Quartile	HCS	WK 18	WK 19	WK 20	WK 21	WK 22	WK 23	WK 24	WK 25	WK 26	WK 27	WK 28	WK 29	WK 30	WK 31	WK 32	WK 33	WK 34	WK 35	WK 36
Q1	≥86%	18	38	40	41	44	37	49	44	36	35	34	38	26	31	24	23	33	50	26
Q2	76%-85%	0	0	1	0	1	0	1	0	0	2	0	0	0	1	0	0	0	0	0
Q3	66%-75%	0	4	4	2	3	3	3	6	4	2	3	0	1	3	2	0	1	5	2
Q4	≤65%	6	11	10	15	16	21	15	13	15	14	10	22	25	17	21	9	17	24	8

Distribution by Supervisor

Quartile distribution of happy customer score performance by Employee count from week 18 to week 36 (May through August).

- Pattern of performance **isn't isolated** to one queue, function, or team
- Improvement requires a **consistent leadership routine**

Statistical outliers:

Leader L13 has 4 survey scores at 25

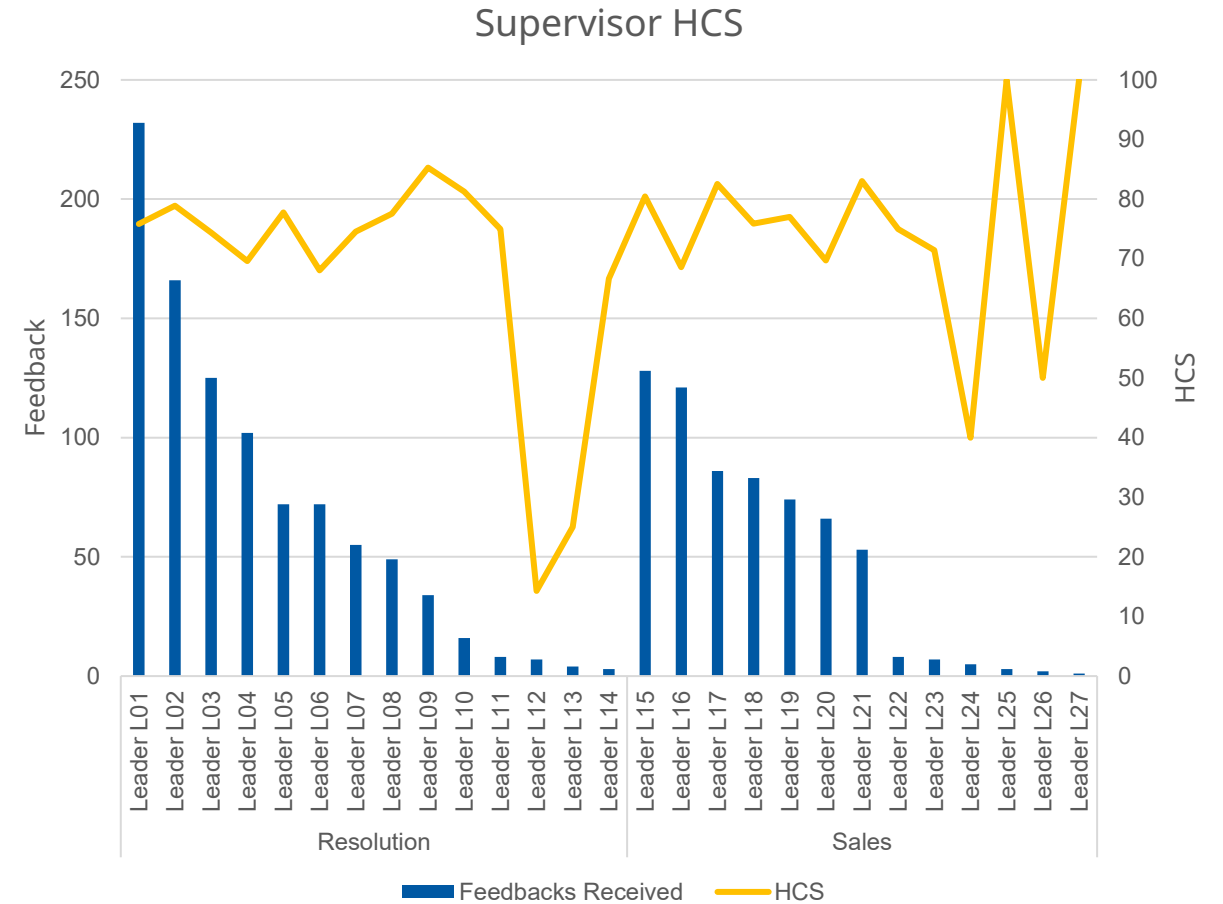

Leader L14 has 3 survey scores at 67

Leader L24 has 5 survey scores at 50

Leader L26 has 2 survey scores at 50

Leader L27 has 1 survey score at 100

Quartile	HCS	WK 18	WK 19	WK 20	WK 21	WK 22	WK 23	WK 24	WK 25	WK 26	WK 27	WK 28	WK 29	WK 30	WK 31	WK 32	WK 33	WK 34	WK 35	WK 36
Q1	≥86%	10	10	8	6	7	7	9	7	8	5	6	7	4	6	5	8	9	6	6
Q2	76%–85%	0	2	2	4	2	2	2	3	0	4	4	1	1	1	0	1	2	4	1
Q3	66%–75%	1	1	5	2	3	2	4	1	4	3	2	4	2	5	3	3	5	6	4
Q4	≤65%	2	4	2	4	4	7	1	7	4	3	4	6	9	7	10	2	5	5	3

The only constant observed is a coaching gap.

Some interactions produce very **strong customer feedback**, while others produce very **poor feedback**, and that **split appears repeatedly**. That tells us this is not simply a matter of one bad week, but it suggests that we need **sustained coaching change, reinforced by leaders in a consistent way**. This change will create a **better experience** for customers and therefore **more positive customer feedback**.

Sentiment Analysis

Knowledge, Manner, and Trust: A Snapshot

- Knowledge
- Manner
- Trust
- Other Patterns in the Verbatims
- High-Risk Employees
- Queue-level Patterns

Knowledge, Manner, and Trust: A Snapshot

Trust is the most important customer sentiment.

- Lowest average score
- Strongest correlation with HCS
- Largest difference between high- and low-scoring interactions

The comparison points us toward trust.

- **Trust** is the **lowest average sentiment**, it has the **strongest relationship with HCS**, and it shows the **largest difference between high- and low-scoring interactions**.
- **Knowledge** and **Manner** still matter, but Trust appears to be the **strongest primary sentiment for improvement**.

Attribute	Average Score	Correlation with HCS
Knowledge	4.30	0.82
Manner	4.44	0.76
Trust	4.03	0.89

Knowledge

~10-20% of negative comments

When Knowledge appears, it tends to be:

- Not knowing policies
- Not understanding products
- Providing incorrect information
- Not knowing where to transfer customers
- Lack of inventory knowledge

What customers are saying verbatim:

- *"Wrong information provided"*
- *"Are you kidding me? Zero knowledge, repeating each question multiple times, no way to get to a solution. *** Retail Contact Center!"*
- *"I'm not sure why it's not possible to call the store directly. The customer service agent really didn't have any in depth knowledge of the product..."*

Rating	Count	Average HCS	Zero-HCS rate
1	144	69.4	99.3%
2	60	0.0	100%
3	89	16.9	83.1%
4	132	58.3	41.7%
5	1089	96.9	0.9%

Rating	Count	Average HCS	Zero-HCS rate
1	106	0.0	100%
2	44	0.0	100%
3	88	14.8	85.2%
4	121	38.8	61.2%
5	1157	94.6	5.4%

Manner

~25-30% of negative comments

Customer can forgive:

- Long Holds
- Delivery Issues
- Policy restrictions

But they struggle to forgive:

- feeling dismissed
- feeling ignored
- Feeling disrespected

What customers are saying verbatim:

- *"My main feedback for this call was that the Employee was very cold, short and answered/spoke as if I was a bother to [GENDER]. [GENDER] was just annoyed and borderline rude throughout the call even though I was being exceptionally polite and cheerful."*
- *"The representative was rude, dismissive, and appeared biased against me..."*

Trust

~50-60% of negative comments

Customers consistently lose trust when:

- Expectations are not met
- Different Employees provide different information
- Cases remain unresolved
- Delivery Vendors fail repeatedly
- Support Teams do not follow through

Common customer remarks:

"I was told one thing and then something else happened."

"Someone promised a callback and I never got one."

"My case was escalated but nobody contacted me."

"My refund was promised but never processed."

"My delivery was scheduled but never arrived."

"I called multiple times and got different answers."

Rating	Count	Average HCS	Zero-HCS rate
1	257	2.7	97.3%
2	59	10.2	89.8%
3	66	37.9	62.1%
4	130	85.4	14.6%
5	1001	99.1	0.9%

High-Risk Employees

Some Employees appear in multiple sentiments as well as in happy customer score as low performing:

- Agent A01 (43.5, 23 surveys)
- Agent A02 (50.0, 26 surveys)
- Agent A03 (50.0, 22 surveys)
- Agent A04 (61.8, 34 surveys)
- Agent A05 (52.6, 19 surveys)
- Agent A06 (56.3, 16 surveys)
- Agent A07 (53.8, 13 surveys)
- Agent A08 (63.6, 22 surveys)
- Agent A09 (61.1, 18 surveys)
- Agent A10 (65.2, 23 surveys)

Knowledge Concerns	Manners Concerns	Trust Concerns
Agent A02	Agent A02 Agent A01 Agent A03	Agent A01 Agent A03 Agent A04 Agent A08

High-Performing Employees

Some Employees stood out as consistently performing high in HCS and in the sentiment analysis:

- Agent A11 (92.1, 38 surveys)
- Agent A12 (93.5, 31 surveys)
- Agent A13 (95.0, 20 surveys)
- Agent A14 (89.3, 28 surveys)
- Agent A15 (87.1, 31 surveys)
- Agent A16 (94.4, 18 surveys)
- Agent A17 (94.4, 18 surveys)
- Agent A18 (94.4, 18 surveys)

Knowledge Stars	Manners Stars	Trust Stars
Agent A13	Agent A13	Agent A13
Agent A12	Agent A12	Agent A12
Agent A11	Agent A11	Agent A11
Agent A19	Agent A19	Agent A14

Other Patterns in the Verbatims

High performance **getting punished for Retail Contact Center process** ~30-35%

- *"The rep was great, but..."*

Tone/Empathy problems ~15-20%

- *"Spoke like she was annoyed"*

Knowledge gaps ~5-10%

- *"Provided wrong information and didn't even know the location was different"*

Ownership is one of the biggest **drivers of positive** feedback ~25-30%

- *"Finally, someone took ownership"*

Trust is more sensitive than knowledge ~40-45%

- *"Promise callback"*
- *"Told issue resolved"*
- *"Told item shipped"*

The verbatims reinforce the sentiment findings. We see customers recognizing **good Employee effort** even when an **Retail Contact Center process** prevents the desired outcome. The phrase **"finally, someone took ownership"** is powerful because it tells us what customers value when a situation is complicated. They do not expect every problem to be solved instantly, but they do expect **someone to take responsibility for helping them move forward**.

Queue-Level Patterns

Queue	HCS	K	M	T	Process Issues	Employee Issues
Voice Support General	78.5	4.41	4.50	4.18	Refunds, callbacks, unresolved cases	Employee manners
Voice Support Delivery	71.0	4.17	4.37	3.84	Delivery vendor failure	Trust & expectations management
Voice Sales Support	80.3	4.49	4.56	4.25	AI, inventory, wrong information	Employee knowledge gaps
Voice Product Support	81.4	4.37	4.48	4.09	Kitchen delays & missing parts	Product & process knowledge
Chat Product Support*	53.2	3.52	3.84	3.35	[queue is closed]	[queue is closed]
Voice Product Support	62.5	3.87	4.18	3.44	Lack of Support & high customer effort	Lack of knowledge & ownership
Chat Enterprise Support	62.5	3.97	4.13	3.55	Lack of Support & responsiveness	Responsiveness & Support

The queue view helps us avoid treating every issue as the same. Different queues may create different customer risks—for example, delivery expectations, refunds, transfers, or chat communication. I recommend that we use this view to tailor the coaching message, **but not to create new ways of working for every queue**. The common behaviors remain trust, ownership, clear expectations, and follow-through. The queue analysis should tell us where those behaviors are breaking down most often.

We should focus our coaching efforts on trust-building, timely feedback, and effective guidelines for leaders.

Recommended Actions

Focus on Trust

Coach to show how we can show ownership in situations of missed promises, unclear ownership, conflicting information, missed callbacks, and unresolved cases.

Identify High-Risk Events

A zero HCS or an attribute score of one or two should prompt a timely review, with the exact service-level expectation agreed by leadership.

Combine Results to Be Strategic

When HCS, sentiments, and quality are low, we have a clear coaching priority. When quality is high, but HCS is low, we investigate process, calibration, or customer-experience gaps. When both are high, we capture the interaction as a positive example.

Survey Volume & Happy Customer Score

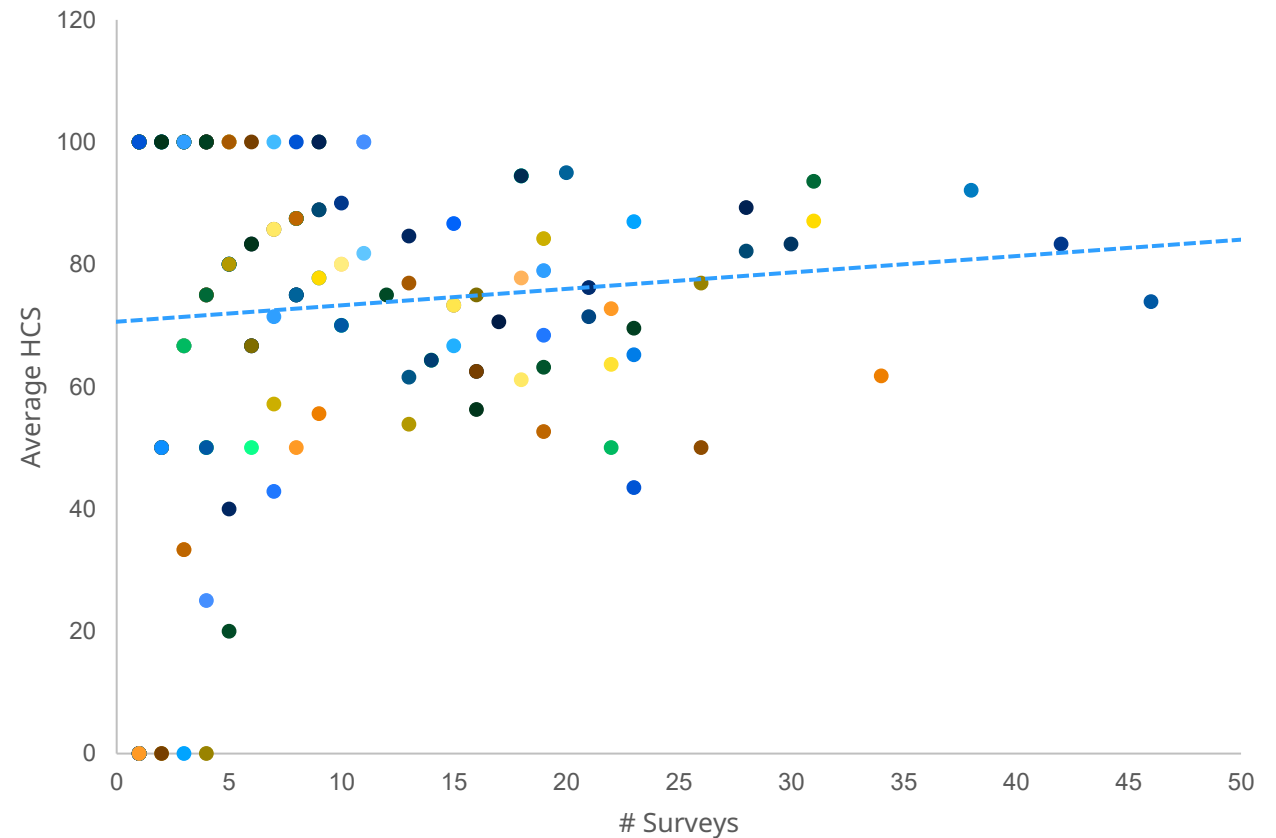

Survey Volume v. Average HCS

There is a small (7%) positive correlation between the number of surveys completed for each Employee and their overall happy customer score performance.

Volume does not appear to be a cause of performance, but may reflect workload, queue assignment, or skill mix.

Higher volume of surveys improves confidence in results.

Survey volume **is not a reliable performance indicator.**

Quality & Happy Customer Score

- Comparison by Employee
- Quality Score Clusters & Happy Customer Score
- Comparison by Supervisor

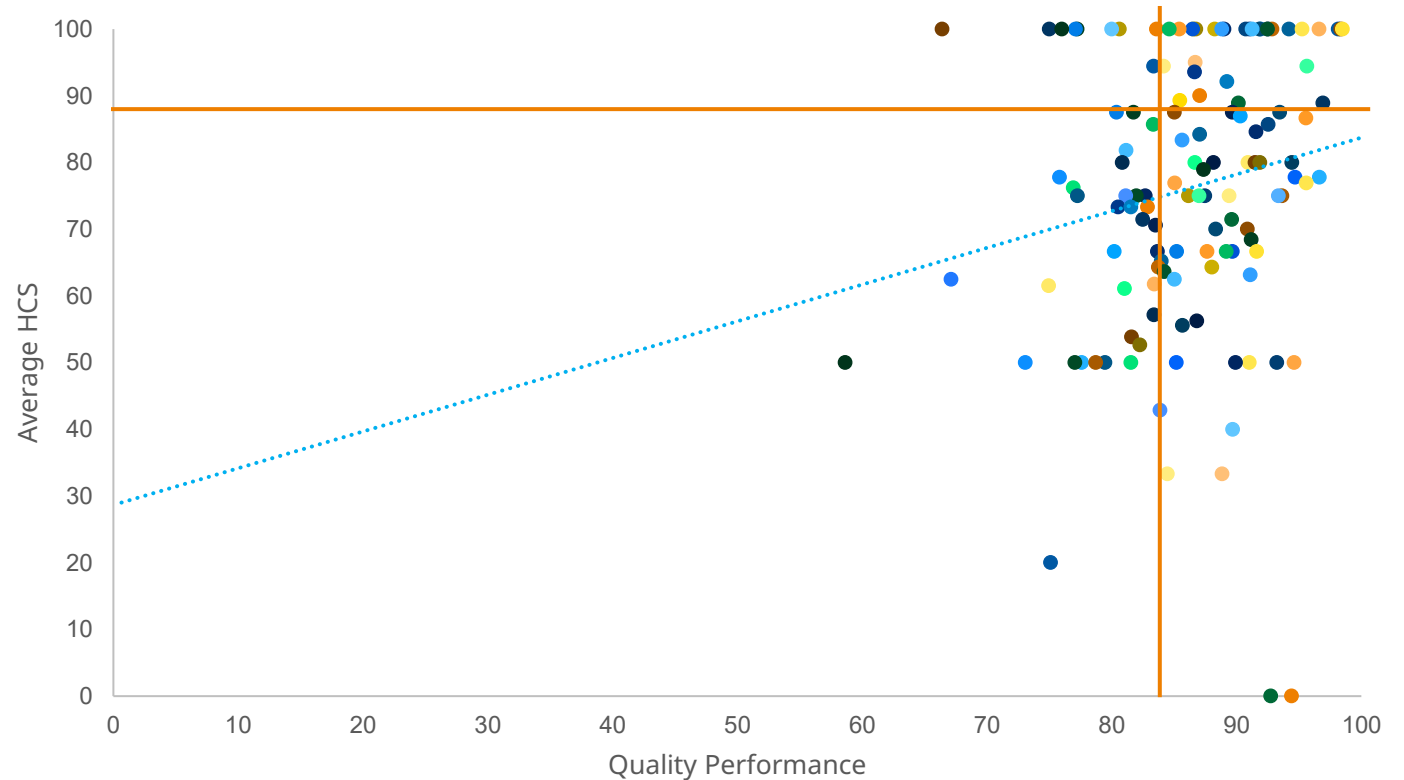

Comparison by Employee

There is a moderate (32%) positive correlation between these two variables. The more surveys that are scored, the stronger the correlation becomes (**44% at 5 survey minimum, 54% at 10 survey minimum**).

There are **only two Employees** with high- quality performance, but a significantly low happy customer score.

When quality is high, but HCS is low, **we should examine calibration, process barriers, or whether the quality measure is missing an important customer-experience behavior.**

When **both are low**, the case is more straightforward: **the Employee needs focused support and follow-up.**

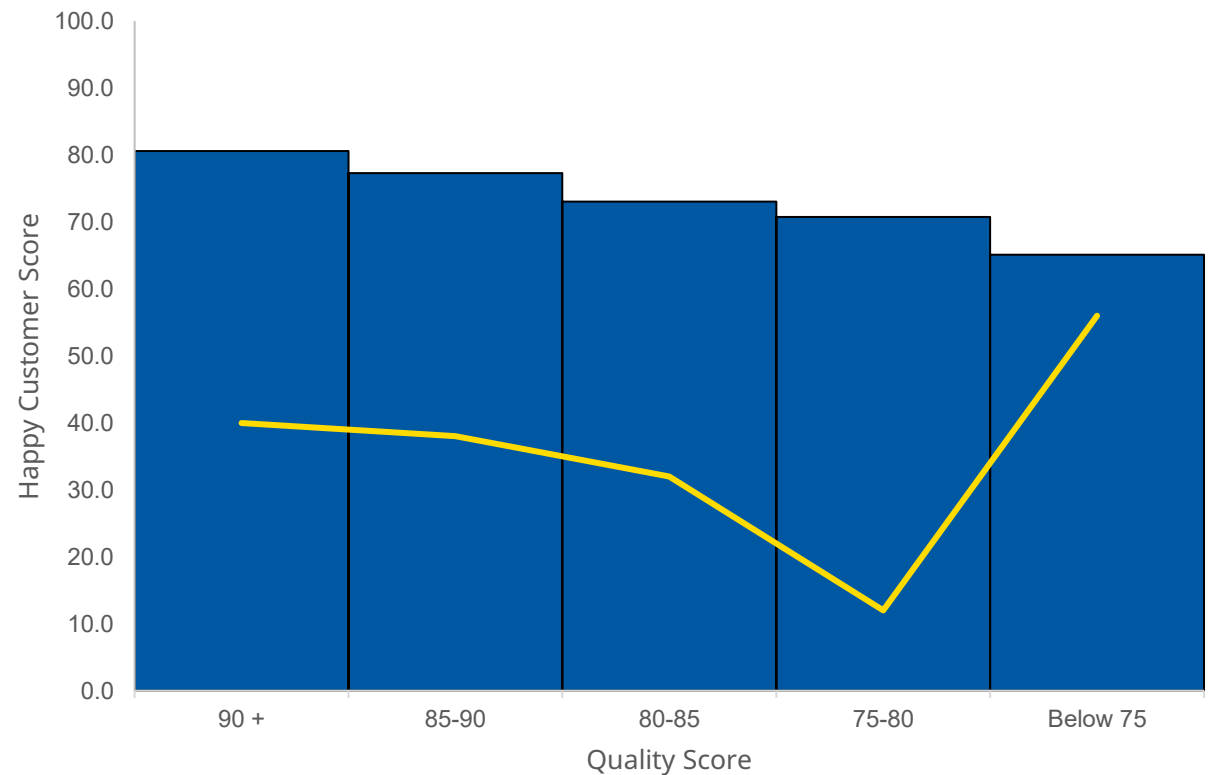

Quality Score Clusters & Happy Customer Score

The cluster view makes the pattern easier to see.

Higher quality groups tend to have **higher average** HCS, while the lower-quality groups show weaker customer outcomes.

The **distribution is polarized**, with substantial numbers of Employees in both lower and higher quality ranges. That is important because it tells us **there are internal examples of the standard we want to reach**.

We should study what high-performing interactions look like and **turn those behaviors into practical coaching examples**.

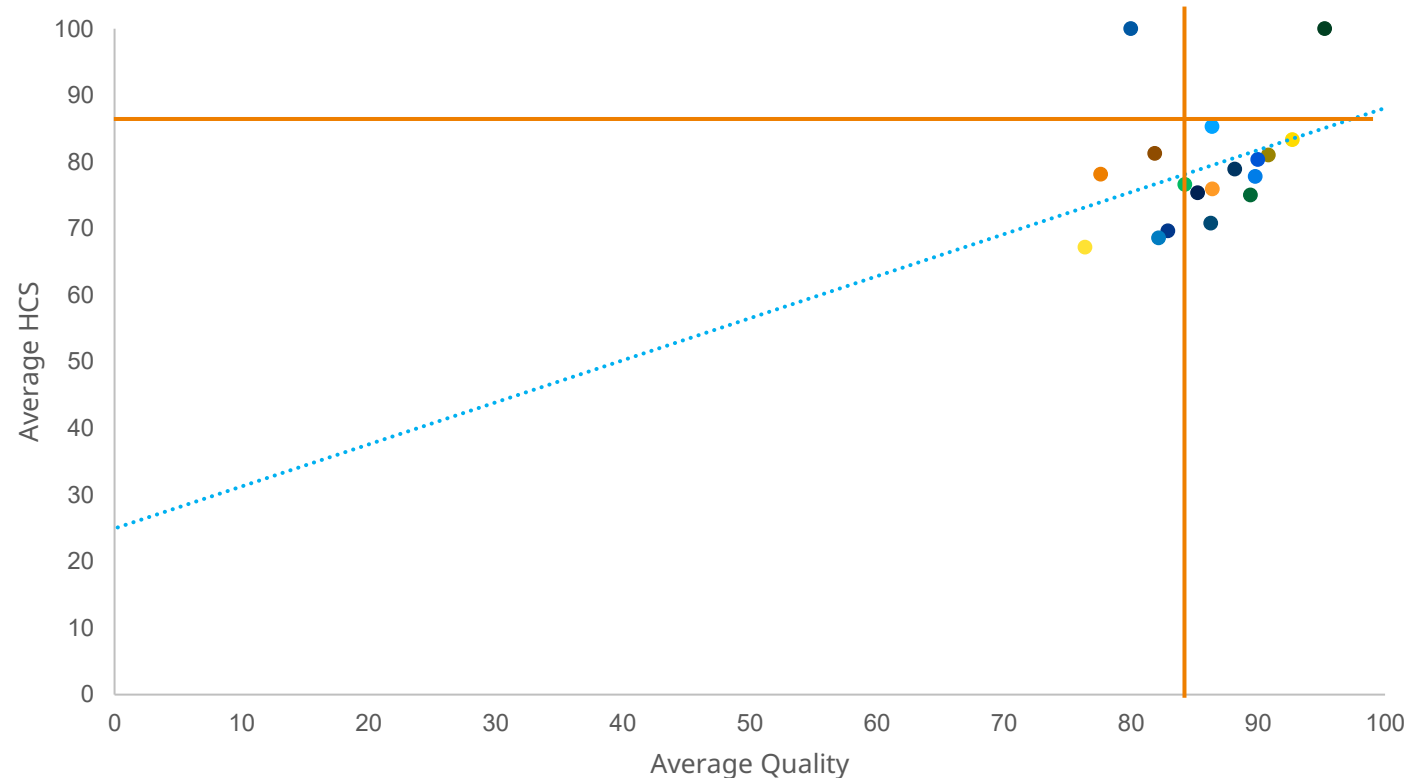

Comparison by Supervisor

There is a moderate (32%) positive correlation between these two variables.

At the team-leader level, the **association between quality and HCS also becomes stronger** as the **minimum survey count increases**.

That supports using aggregated results carefully: **small samples can produce impressive-looking scores that are not stable**.

The analysis suggests that an **average quality result around 96.64%** is associated with **reaching an HCS of 86 or higher** in this dataset.

**Reaching
86 HCS requires a
higher quality
standard.**

Recommended First Next Steps

Immediate outreach to low performers for priority coaching and support

- **Elevate our leaders' ability to coach** with a more **targeted coaching strategy** focused on trust-building communication
- **Define** what "trust-building" looks like, the Retail Contact Center way.
- **Support** from **Specialists and RAMS** on **quality calibrations**

Add positive accountability, not just corrective accountability

- **Recognize** improvements in Trust
- **Share examples** of successful ownership
- **Celebrate team** and individual improvements

Hold leaders accountable for completing evaluations & coaching in timely fashion

- **Timely feedback** on high-risk interactions based on a formal response process
- **Use of coaching tools** ([Proprietary Tool], PowerBI reports)

Happy Customer Score Message House

To reach 86, the Retail Contact Center needs to make strong customer experiences repeatable: reduce performance variation, build trust through reliable follow-through, and act on risk signals before problems become patterns.

The path to 86 is through trust-led consistency.		
Reduce Variation	Build Trust	Act Earlier
<i>The performance gap is consistent.</i> In several weeks we see polarized performance indicating that improvement requires sustained behavior change.	<i>Trust is the lowest-scoring customer attribute.</i> Knowledge: 4.30 Manner: 4.44 Trust: 4.03	Survey results can identify risks before monthly performance is reviewed. Low attribute ratings often correspond with low HCS performance.
<i>Performance variation exists among coworkers and teams.</i> This supports a consistent leadership approach rather than isolated interventions.	<i>Trust has the strongest correlation with HCS with a score of $r = 0.86$.</i> This is compared to $r = 0.82$ for knowledge and $r = 0.76$ for manner.	<i>Quality is useful for targeting attention but doesn't explain the entire customer experience.</i> The quality correlation strengthens with more survey results. With 5 surveys minimum, $r = 0.44$, at 10 $r = 0.54$.
<i>The 86 goal is associated with a higher quality standard.</i> Research identifies 96.64% average quality as the level associated with at least an 86 HCS.	<i>Low trust scores are strongly associated with poor outcomes.</i> When trust is rated 1 to 2, the customer rates HCS at a 0 in 89% to 97% of cases.	<i>Survey volume is not a reliable performance indicator.</i> The relationship between survey volume and HCS performance is weak ($r = 0.08$). Leaders should use volume to understand result confidence, while still holding coworkers accountable for behaviors that can influence customer experience.

***"What is good for our
customers is also, in the
long run, good for us."
-Ingvar Kamprad***

Thank you

Monchelle Davis
